the risk is 1733.59507488 : iteration 30000

```

After the 30000 iteration, we achieve the lowest training risk 1733.59507488. We plot the training risk over the number of iterations.

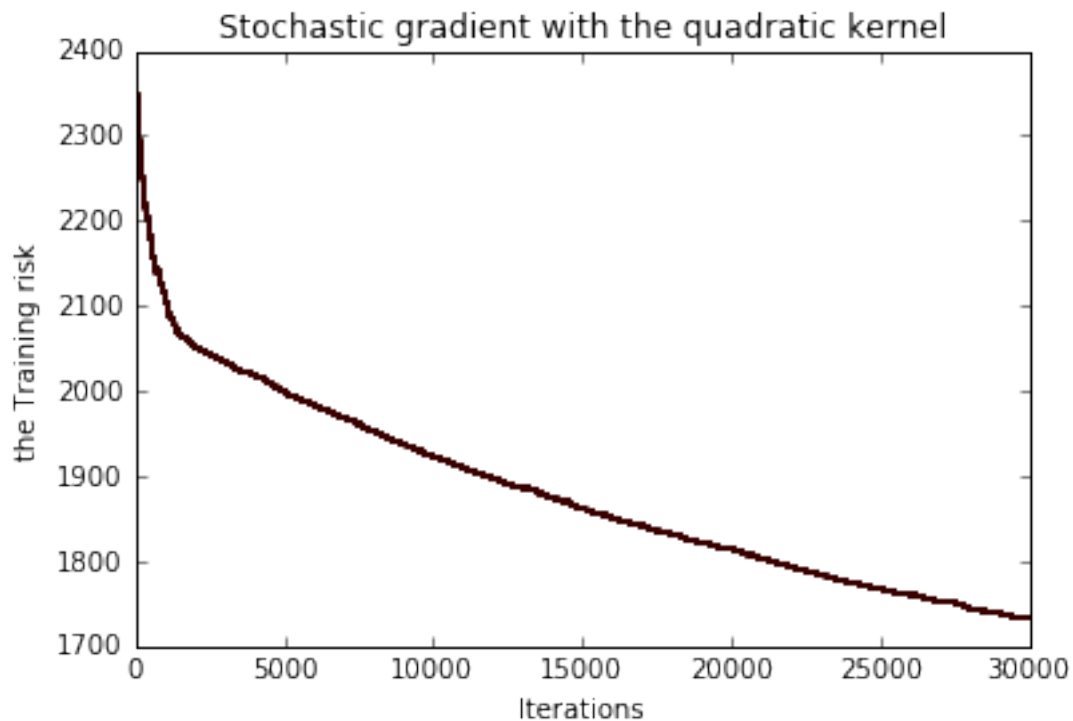

```

In [88]: xpos = np.arange(len(training_risk_kernel[0]))+ 1

plt.plot(xpos, training_risk_kernel[0], 'ro', ms =1)
plt.xlabel('Iterations')
plt.ylabel('the Training risk')
plt.title('Stochastic gradient with the quadratic kernel')

plt.show()

```

```
In [90]: validation_risk_kernel = stochastic_gradient_kernel_print(sp_xtrain0, sp_xvalid, sp_ytrain0,
                                                                    sp_yvalid, 19, 1e-5, 1e-3, 30000, quad)
```
