After 30000 iterations, the training risk decreases down to 2099.345999 in logistic ridge regression with

the linear kernel. We plot the training risk over the number of iterations.

```
In [119]: xpos = np.arange(len(training_risk_kernel_linear[0]))+ 1

plt.plot(xpos, training_risk_kernel_linear[0], 'ro', ms =1)
plt.xlabel('Iterations')
plt.ylabel('the Training risk')
plt.title('Stochastic gradient with the linear kernel')

plt.show()
```

### Validation risk

```
In [118]: validation_risk_kernel_linear = stochastic_gradient_kernel_print(sp_xtrain0, sp_xvalid,
